

Application for Service

The builder will need to complete the attached **New Residential Service Application** form as follows:

- Complete the form and attach the site plan/plat with the desired meter location marked. Fax or mail to the address indicated on the form.
- Please ensure the appliance and pressure information on the form is accurate. This information is critical in setting the correct metering equipment.
- Once the meter is installed, the HVAC/plumbing contractor can then tie in the fuel line (after inspection approval), check for leaks and light the appliances.
- Contact the Builder Hot Line (1-800-599-3770) if you plan on using gas during the construction period.
- Encourage the homeowner to contact AGL's Builder Hot Line, at or before closing, (1-800-599-3770) to establish the gas account. This will remove the account from the builder's name.

If you have any questions, please contact your local sales representative.
