

## **Standard Meter Locations**

Atlanta Gas Light Company (AGLC) has enjoyed a great partnership with builders for many years. Our goal is to continue that strong relationship by providing your new homebuyers with the most desired energy choice available - Natural Gas - and by providing you with timely and dependable gas service at the lowest possible cost.

Our standard meter location policy went into effect March 15, 2001. The standard meter location policy will consistently place the gas meter on the side of the home within five feet of the front building wall. Having a designated meter location will help keep our construction cost to the builder at a minimum. This practice will also allow our construction department to quickly establish your service line and subsequently eliminate rush services.

We realize that a standard meter location will not be practical in every situation. When an exception to the policy is necessary, your AGLC representative will assist you in determining a suitable meter location at no cost. However, if you choose an alternate meter location, there could be a charge of \$8.00 per foot (excluding taxes) from the standard meter location to your preferred location. The preferred meter location charge has effective since May 1, 2001.

Again, our goal is to provide timely and dependable gas service at the lowest cost possible, and we believe that providing standardized meter sets will save you and your customers, time and money during the building process.

If you have any questions or concerns about this program, please contact your local sales representative.
